ABOUT ME

Fullstack developer, **6 years of experience**, 24 y.o. Hold a driver's license. Main languages — **Go** and **Python**; also React / TypeScript and Rust. I build products from idea to launch: backend, UI, infrastructure, and deploy.

Strong areas: microservices, real-time systems, fault-tolerant infrastructure, Telegram bots and Mini Apps, AI integrations, payments, DeFi on TON, desktop apps (Tauri / Electron).

Proactive employee: I suggest improvements myself, get management buy-in, and deliver the implementation. Comfortable both in a team and working independently.

SOFT SKILLS

- **Punctuality** — deliver on time, comfortable with fixed deadlines
- **Responsibility** — take ownership of hard tasks and finish them; flag risks early
- **Initiative** — propose improvements, then lead and implement after approval
- **Multitasking** — run several projects in parallel without losing quality
- **Self-management** — plan work and priorities myself; do not need constant oversight
- **Fast learning** — quickly pick up new technologies when the product needs them
- **Communication** — explain decisions clearly to teammates and management

SKILLS

Backend: Go (Gin, Echo), Python (Django, FastAPI, aiogram), gRPC, REST, WebSocket, JWT, 2FA/TOTP, Celery

Real-time: WebRTC, WebSocket, NATS, HTTP/3, QUIC, WebTransport

Frontend: React, Next.js, TypeScript, Vite, Tailwind, TanStack Query, Telegram Mini Apps

Blockchain: TON, DEX aggregators, indexer, swap routing, Jettons, TON Connect

DevOps: Docker, Docker Swarm, Ansible, GlusterFS, Nginx, GitHub Actions, Prometheus, VictoriaMetrics, Grafana

Databases: PostgreSQL, PostgreSQL HA (Patroni/etcd/HAProxy/PgBouncer), Redis, ClickHouse, Bun, GORM, pgx

Desktop: Rust (cpal, Axum, SQLx), Tauri 2, Electron, N-API, Android

AI: OpenAI, Deepgram, Google Gemini / Gemini Live, ElevenLabs, Edge TTS, fal.ai, kie.ai, RIFE

Payments: Stripe, Robokassa, Privy, Plaid, Solana

Other: Git, Linux, multi-region / fault-tolerant systems, i18n

EXPERIENCE

Backend / Infrastructure Developer — VNISH Monitoring

03.2025 — present

Multi-region monitoring platform for ASIC miners: real-time telemetry, alerts, group operations, Telegram Mini App, fault-tolerant infrastructure.

- Go backend: gRPC streaming for agents + REST API (Echo); Bun/pgx, JWT, 2FA (TOTP), goose, Swagger
- Real-time metrics aggregation + micro-batching of status writes so writes don't block the hot path
- Telegram Mini App (React 19 / TypeScript / Vite / Tailwind): dashboards, group farm operations, i18n
- Designed and deployed from scratch: Docker Swarm (7 nodes, 3 regions), PostgreSQL HA (Patroni/etcd/HAProxy/PgBouncer), GlusterFS, VictoriaMetrics/VictoriaLogs/Grafana, Ansible bootstrap, GitHub Actions CI/CD
- **Initiative:** proposed a multi-region fault-tolerant infrastructure; after management approval, led design and rollout of the cluster

Business result: stable farm monitoring across 3 regions without downtime when one site fails, faster incident response via alerts, less manual work on updates and releases.

Go · Echo · gRPC · PostgreSQL HA · Redis · React · Docker Swarm · Ansible · VictoriaMetrics · Grafana · GitHub Actions

Fullstack Developer — Signvano

08.2025 — present

Real-time video streaming and content generation platform (sign language, AI avatars).

- Distributed architecture: API Gateway (Go) + streaming servers with gRPC service discovery and load balancing
- Video pipeline: WebSocket / HTTP/3 + QUIC (WebTransport) → WebRTC SFU → NATS → GPU clients over gRPC
- Task queue abstraction (PostgreSQL/Redis), Stripe billing, React admin panel, CI/CD for streaming nodes
- **Initiative:** proposed splitting the API Gateway and streaming nodes for scale; after approval, organized the rollout and auto-deploy

Business result: the platform handles growing load, monetization via Stripe subscriptions is live, new streaming servers ship faster with less manual ops.

Go · gRPC · PostgreSQL · Redis · NATS · WebRTC · HTTP/3 · React · TypeScript · Docker · GitHub Actions

Fullstack Developer — LiveVoice · pet project

06.2026 — present

Cross-platform desktop app for real-time bidirectional voice translation in video calls (e.g. Google Meet).

- Low-latency pipeline: audio capture → STT → translation → TTS in both directions
- Native Rust audio engine (cpal, WASAPI loopback, PulseAudio/pactl), exposed via N-API
- Providers: Deepgram, Google Gemini Live, Kie, Edge TTS; echo guard, TTS cache, virtual mic routing
- Leading migration from Electron + Node to Tauri 2 with an all-Rust backend

Result: working speech-to-speech translation tool with a native cross-platform audio stack.

Rust · cpal · WASAPI · Tauri · Electron · TypeScript · WebSocket · Deepgram · Google Gemini Live · Edge TTS

Fullstack Developer — SignSync · pet project

06.2026 — present

Cross-platform Russian Sign Language (RSL) translator: speech/text → gloss → seamless avatar video. Desktop, Android, landing, Rust backend.

- Pipeline: mic/text → STT → Gemini gloss (RSL) → seamless clip playlist (batch + realtime)
- Tauri 2 app (React 19 / TypeScript / Vite / Tailwind + Rust): cpal capture, Stronghold keys, seamless video player
- Rust API (Axum + SQLx + PostgreSQL): Telegram auth, JWT, credits/api_key, STT proxy (Deepgram/ElevenLabs)
- GPU video pipeline (RIFE + FFmpeg); nginx auth_request for /clips/; Docker Compose + GitHub Actions builds

Result: working RSL product with cross-platform clients, Telegram accounts, monetization hooks, protected media delivery.

Rust · Axum · SQLx · PostgreSQL · Tauri 2 · React · Deepgram · ElevenLabs · Gemini · RIFE · Docker · GitHub Actions

Fullstack Developer — SvetlanaBot

03.2026 — present

AI therapist on Telegram: LLM chat, Mini App, subscriptions, content generation.

- Go backend: Telegram webhook, REST API, WebSocket chat with streaming LLM responses
- Telegram Mini App in React; OpenAI, ElevenLabs, fal.ai/kie.ai; Robokassa billing; bulk broadcasts with rate limiting
- **Initiative:** proposed and shipped subscriptions, credits, and a Mini App; aligned with the client and led the launch

Business result: the product launched with clear monetization; users go from onboarding to payment without manual support at every step.

Go · PostgreSQL · Redis · React · TypeScript · Docker · Prometheus · Grafana

Backend Developer — RPine

2023 — present

TON ecosystem startup: smart DEX aggregator with optimal swap routing and transparent fees.

- Backend APIs for quotes/swaps; liquidity aggregation from 4+ TON DEXs
- TON blockchain indexer; Pathfinder multi-hop routing engine; Telegram bot (swaps, private pools)
- **Initiative:** proposed Pathfinder and private pools with a price lock; management approved, and these became core product features

Business result: users get better swap routes and transparent fees; Telegram entry lowered the barrier and expanded reach.

Go · Python · PostgreSQL · Redis · TON · Telegram Bot API · Docker

Fullstack Developer — Screener Exchange Spread · pet project

01.2025 — present

Spread screener and trading bot for crypto exchanges (RPine ecosystem).

- Real-time quote collection, spread/arbitrage computation, trading logic, React live dashboard, Telegram auth

Result: tool for monitoring cross-exchange spreads and automating trading decisions.

Go · Python · PostgreSQL · Redis · React · TypeScript · Docker

Backend Developer — PhotoPenguin Bot

02.2025 — present

Telegram bot for generating photos, videos, and music.

- aiogram + Django Ninja REST API; Celery + Celery Beat pipeline; fal.ai/kie.ai; Robokassa billing
- **Initiative:** proposed moving long AI jobs to Celery queues so the bot stays responsive; approved and implemented by me

Business result: the bot stays stable during long generations; paid generations are live and drive repeat purchases.

Python · Django · Django Ninja · aiogram · Celery · Redis · PostgreSQL · Docker

Fullstack Developer — Otty ASL

04.2026 — present

EdTech platform for learning American Sign Language (ASL).

- Gamified learning (lessons, dictionary, practice, leaderboard); streaks/rewards; subscription + trial model

Result: interactive ASL learning platform with retention through gamification.

React · TypeScript · PostgreSQL · Docker

Backend Developer — GetRealPrice

05.2022 — 05.2023

B2B SaaS: product matching and price monitoring for retail and FMCG (13 countries).

- Django + FastAPI REST APIs; Celery price parsing/monitoring; product matching across marketplaces
- **Initiative:** proposed queue and cache optimizations for hot queries; after approval, reduced database load

Business result: the backend scaled with clients across 13 countries, faster API responses, fewer overload incidents.

Python · Django · FastAPI · Celery · Redis · PostgreSQL · Docker

Web3 SaaS for crypto companies: contracts, signatures, treasury, compliance.

- Go backend + Next.js dashboard; AI agents for SAFE/NDA/employment agreements; e-signatures via Privy; Solana + Plaid treasury
- **Initiative:** proposed AI agents for auto-generating contracts; idea was accepted, I led rollout and signature integration

Business result: clients prepare and sign documents faster in one product; less manual legal work on standard contracts.

Go · Gin · GORM · PostgreSQL · Next.js · TypeScript · Privy · Plaid · Docker

EDUCATION

Simferopol Polytechnic College

Major: **Information Systems and Programming** · Qualification: **Programmer**

Vocational secondary education

HOBBIES & INTERESTS

- **Dog training & animal psychology** — I train my dog, study zoopsychology, and completed a dog-training course. It builds patience, systematic thinking, and feedback loops — the same habits I use in engineering.
- **Continuous growth in IT** — actively exploring AI-assisted development (“vibe coding”): courses on multi-agent systems, agent orchestration, and shipping LLM features into products. I follow AI-assisted engineering practices and apply them in real work right away.
- **Pet projects across domains** — I regularly build my own products to learn new stacks and domains: real-time voice translation (LiveVoice), Russian Sign Language translator (SignSync), ASL EdTech (Otty). For me this is how I keep growing as an engineer instead of staying in one niche.
